

SPRAY CONTAINMENT

AVOID THE MESS

The Nasarc Spray Containment Unit will help to reduce the amount of slag and anti-spatter residual left on the reamer and surrounding weld jigs by managing the over spray in its catch basin. A quick fitting is available to connect a drain line and direct the unused anti-spatter fluid to a convenient disposal site.

PRODUCT ADVANTAGES

01

- The Spray Containment Unit consists of a cone and small reservoir which fits around the reamers existing spray nozzle.

02

- Over-spray falls through a screen in the lower reservoir and through the drain line to a catchment below.

03

- The lower reservoir captures large bits of spatter on its internal mesh screen and is easily removed to periodically empty its contents.

04

- This unit may be added to existing reamers, or as an option on new orders.

TECHNICAL DATA

Dimensions:	2.75" D x 4.0" H
Drain Line Fitting Diameter:	3/8"
